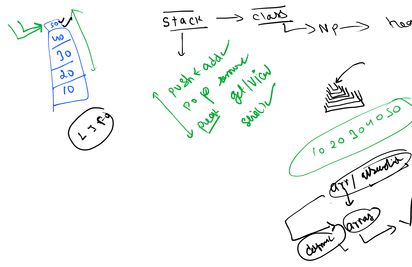
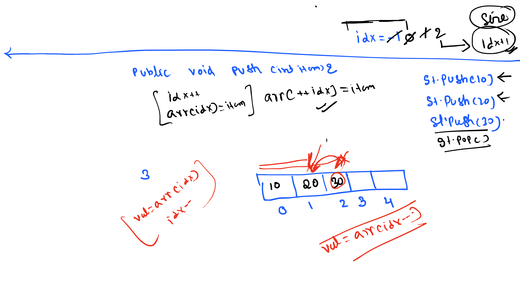
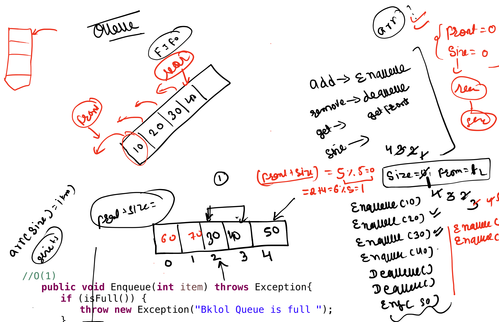
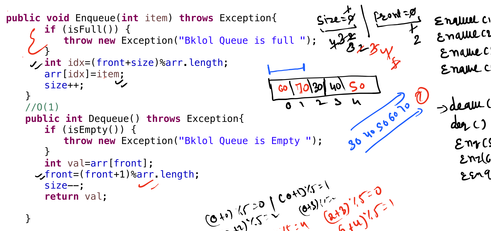
```
    public void setAge(int age) throws Exception {
        if (age < 0 || age > 120) {
        throw new Exception("bklol age range me nhi h");
        }
        this.age = age;
    }
public static void main(String[] args) throws Exception{
        // TODO Auto-generated method stub
        Student s = new Student("Ankit", 24);
        s.setAge(-9);
        System.out.println(s.getAge());
        System.out.println("Bye");

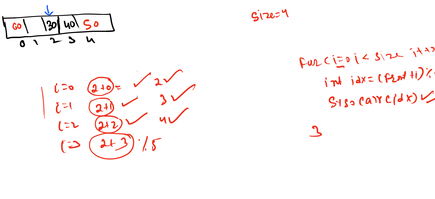
    }
```











```
    //O(1)
    public void Enqueue(int item) throws Exception{
        if (isFull()) {
            throw new Exception("Bklol Queue is full ");
        }
        arr[size]=item;
        size++;
    }
    public int Dequeue() throws Exception{
        if (isEmpty()) {
            throw new Exception("Bklol Queue is Empty ");
        }

    }
```
